All Kids2Talk project products are made of environment friendly materials. All colors, textures and print products are free of toxic colors and other allergy causing components. All fabrics, puppets and smaller wooden toys may be washed. Print products and all other materials are water resistant and easy to clean. Edges were refined in order to prevent any cuts or accidents.

“Spielzeugschachtel” from Salzburg, the Austrian partner, monitored the entire production process in order to ensure quality standards. All EU regulations for toys were applied and all products are certified as “safe toys”. Some materials were directly produced in local handicraft stores using natural local raw materials. Other games used existing toy and game products and altered them for the specific use with the Kids2Talk project. Producers of professional toys and games were involved into the production process in to order prepare pathways for a later commercial use of all project products.
